INTERVIEW AGENDA

In re Application of:	)
	)
Joerg BERINGER et al.	) Group Art Unit: 2162
	)
Application No.: 10/658,584	) Examiner: Jami, Hares
	)
Filed: September 8, 2003	) Confirmation No.: 1932
	)
For: RESOURCE FINDER TOOL	)

Per the telephone call with Examiner Jami, Applicant's representative proposes the following agenda for an interview on December, 21, 2010 at 11:00 AM:

1.   Discuss Office Action mailed August 3, 2010.

2.   Discuss cited references, particularly the *Vianello*, *Marchisio*, *Coiera*, and *Bourdoncle* references. Discuss proposed amendments to independent claim 1 as attached to this paper, and how claim 1 distinguishes over cited references.

3.   Address Examiner's questions.

Proposed Claim Amendments

1.   (Proposed Amendment) A method comprising:

creating a data source of resource profiles associated with a plurality of

resources, the resources being of a resource type;

approving whether or not a user can edit the resource profiles;

editing the resource profiles based on the approval;

receiving, through a user interface, first attributes of a resource desired by a

user;

searching the data source of resource profiles for profiles having one or more of

the first attributes;

providing a hit-list of resources having the one or more first attributes;

receiving second attributes of the resource through a refinement user interface;

searching the hit-list for resources having the second attributes;

providing a narrowed hit-list of resources having the first and second attributes;

~~storing the hit-list as a collection of resources which is used for further actions or~~

~~stored as a persistent collection, the stored hit-list including a collection of~~

~~heterogeneous resources; and~~

saving the hit-list as either a static or dynamic collection;

wherein, a static collection comprises a stored snapshot of the

located resources;

wherein, a dynamic collection comprises a stored query used to

locate the resources;

selecting a layout of the user interface from a plurality of layouts based on the

first attributes,

wherein the first and second attributes have dimensions, the method further

comprising:

creating segments of the hit-list by grouping the resources by one of the attribute

dimensions and displaying statistics associated with the segments;

receiving a selection of segments through the user interface; and

providing a narrowed hit-list by selecting one or more resources from the

selected segments.
